

Sandhill Consultants is a group of people, products and processes that help our clients:

- ◇ Build comprehensive Data Architectures
- ◇ Resulting from a persistent Data Management Process
- ◇ Founded on a robust Data Governance Practice
- ◇ Build comprehensive Data Architectures

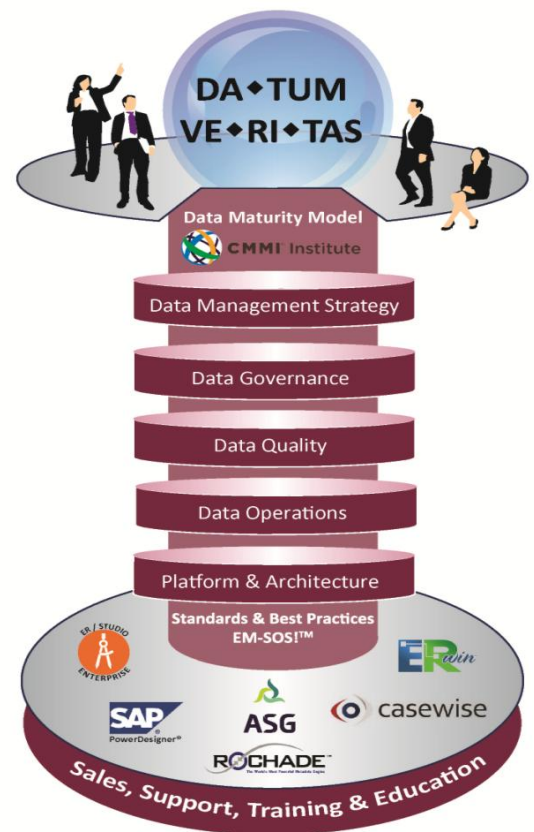

The Data Management Maturity (DMM)SM Model

For organizations that seek to evaluate and improve their data management practices, **CMMI® Institute** has developed the **Data Management Maturity (DMM)SM** model to bridge the perspective gap between business and IT. It provides a common language and framework depicting what progress looks like in all of the fundamental disciplines of data management, and offers a graduated path to improvement which is easily tailored to an organization's business strategies, strengths and priorities.

Data Management Maturity (DMM)SM Assessment

Sandhill can help your organization understand what capabilities you will need to achieve a comprehensive data architecture. Understanding the capabilities is a good first step, but you will also need to determine your organization's competency to achieve higher levels of performance in data management.

Sandhill offers a DMMSM Assessment, incorporating a strategy which centers on the improvement of an organization's data management process. Sandhill DMMSM is the key to bringing an effective return on opportunity for data governance efforts, and delivering trusted reliable data.
